# Introduction

The following Ambient Air Monitoring report was prepared for:

Mr. Mike Bisaga  
**Lakeland Industry & Community Association**  
Box 8237  
5107W – 50 Street  
Bonnyville, Alberta  
T9N 2J5

Monitoring Location: Cold Lake

Data Period: July 2009

The monthly ambient data report:

- Prepared by Lily Lin
- Reviewed by Craig Snider

The monthly analytical report for passive monitoring:

Authorized by Levi Manchak

## Calibration Procedure

The following calibration procedure applies to all calibrations conducted at the Lakeland Industry & Community Association Air Monitoring Station.

Calibration gas concentrations are generated using a dynamic mass flow controlled calibrator. EPA Protocol one gases are diluted with zero air generated on site. The Mass Flow Controllers in the calibrator are referenced using an NIST traceable flow meter once per month. All listed flows are reported as corrected to Standard Temperature and Pressure (STP).

Generated zero gas is introduced to the analyzer first. Three concentrations of calibration gas are then generated in order to introduce points at approximately 50-80%, 25-40% & 10-20% of the analyzer's full-scale range. An auto zero and span are then performed to validate the daily zero and span values recorded to the next multi-point calibration.

All indicated concentrations are taken from the ESC data logger used to collect the data for monthly reporting.

Conformance of each calibration to Alberta Environment regulations is outlined in the individual calibration reports. The slope and correlation coefficient are derived from the calculated and indicated analyzer responses. The percent change is calculated using the previous calibration correction factor and the current correction factor before adjustment. The calibration conforms to the procedure outlined in the *Air Monitoring Directive, Appendix A-10, Section 1.6*.

# General Monthly Summary - Cold Lake

## Equipment Operation

The following summary outlines the analyzer performance. Any non-conformances, problems or maintenance performed are detailed at the end of each section.

## AQM STATION – LICA – COLD LAKE

### Sulphur Dioxide (PPB)

- Analyzer make / model – Thermo 43i

No operational issues observed during the month. The inlet filter was changed before the monthly calibration was started on July 13<sup>th</sup>. An error was made during the monthly calibration; the final span point was missed. The calibration was repeated on July 14<sup>th</sup>. No issue was discovered. Data was corrected using daily zero information.

### Total Reduced Sulphur (PPB)

- Analyzer make / model –TEI 450i
- Converter - CD NOVA CDN 101

No operational issues observed during the month. The inlet filter was changed before the monthly calibration was started. Data was corrected using daily zero information.

### Nitrogen Dioxide (PPB)

- Analyzer make / model - TECO 42C

No operational issued observed during this month. The inlet filter was changed before the monthly calibration was started. Data was corrected using daily zero information.

### Total HydroCarbon (PPM)

- Analyzer make / model -TECO 51C-LT

No operational issues observed during the month. The inlet filter was changed before the monthly calibration was started. Data was corrected using daily zero information.

# General Monthly Summary - Cold Lake

## AQM STATION – LICA – COLD LAKE

### Ozone (PPB)

- Analyzer make / model - TECO 49I

No operational issues observed during the month. The inlet filter was changed before the monthly calibration was started.

### Particulate Matter 2.5 ( $\mu\text{g}/\text{m}^3$ )

- Analyzer make / model –TEOM1405F

No operational issues observed during this month. A Teom audit was performed on July 14<sup>th</sup>. The Teom and FDMS filters were replaced. Nine hours of data were invalidated as it was below  $-3.0 \mu\text{g}/\text{m}^3$ .

### Vector Wind Speed (KPH) & Vector Wind Direction (DEG)

- System make / model – Met One 50.5

No operational issues observed during the month. The wind system is reported as vector wind speed and vector wind direction.

### Relative Humidity (PERCENT)

- System make / model - Rotronic Hygroclip-S3

No operational issues observed during the month.

### Ambient Temperature (DEGC)

- System make / model - Rotronic Hygroclip-S3

No operational issues observed during the month.

# General Monthly Summary - Cold Lake

## AQM STATION – LICA – COLD LAKE

### Trailer Temperature (DEGC)

- System make / model - R&R 61

No operational issues observed during the month.

### Datalogger

- System make / model - ESC 8832
- Software make / version - ESC v 5.51a

The ESC 8832 is connected to a modem with DSL for continuous connection with the base computer.

### Trailer

No issue was observed during this month. The manifold was cleaned on July 13<sup>th</sup>.

### Air Quality Index (AQI)

The AQI data was adjusted to reflect regular monthly and daily calibrations, maintenance, and downtime. All AQI values recorded in January were within the good range. The highest hourly concentration of PM2.5 was 23.4 UG/M3 and an AQI value of 20 on July 25<sup>th</sup>, hour 3. The highest hourly concentration of Ozone was 49 ppb and an AQI value of 25 on June 24<sup>th</sup>, hour 15.

### Passive Network

The original Cold Lake South site (CASA#22) was put back at clients request.

The St. Lina site (CASA#32) was added.

The SO2 and SO2 duplicate at Frog Lake site (CASA#18) were damaged.

## SO<sub>2</sub> Calibration Report

### Station Information

Calibration Date	July 13, 2009	Previous Calibration	June 4, 2009
Company			
Plant / Location	LICA 1 - Cold Lake South		
Start Time (MST)	10:35	End Time (MST)	14:13
Reason:	Monthly Calibration		
Barometric Pressure	710 mmHg	Station Temperature	22 Deg C
Cal Gas	52.2 ppm	Cal Gas Expiry date	12/19/2010
DAS Output Voltage	0 - 10 Volts		

### Equipment Information

Analyzer Make / Model:	Thermon 43i	S/N :	806528242	Method:	UV absorbtion
Converter Make / Model:		S/N :			
Calibrator Make / Model:	API 700	S/N :	831	Method:	Dilution
DAS Make / Model:	ESC 8832	S/N :	263		
Flow Meter:	API 700	S/N :	831		

### Analyzer Settings

Concentration Range	Before Calibration			After Calibration		
	0 - 500	ppb	0 - 500	ppb	0 - 500	ppb
Sample Flow / Box Temp	446 ccm	27.7 Deg C	444 ccm	27.6 Deg C	444 ccm	27.6 Deg C
HVPS / Lamp Setting	-631	747	-631	747	-631	747
PMT / RxCell Temp	OK Deg C	44.9 Deg C	OK Deg C	45.2 Deg C	OK Deg C	45.2 Deg C
Converter / IZS Temp	NA Deg C	45.0 Deg C	NA Deg C	45.0 Deg C	NA Deg C	45.0 Deg C
Offset / Slope	5	1.049	5	1.032	5	1.032

### Calibration Data

## Station

Date: July 13, 2009  
 Station Name: LICA 1  
 Location: Cold Lake South  
 Operator: LICA

## Audit Transfer Standard

Make/Model: Bios DC2  
 Serial Number: 1193  
 Cell s/n: 2272  
 Thermometer s/n: 2178

## Sampler

Make/Model Thermo Scientific Series 1405F  
 Unit # AMU 1775  
 Unit s/n 1405A201620804  
 Firmware Ver. 1.22  
 Parameter PM 2.5 (with FDMS)

## Set-up and current Sampler readings

F-Main Set Pt (l/min)	3.00
F-Aux Set Pt (l/min)	13.67
Filter Load (%)	44%
K <sub>o</sub> Factor	14578.0
Temp (°C)	19.4
Press (ATM)	0.929

## Conversion from mmHg or "Hg to ATM (Atmospheres)

$$\text{ATM} = (\text{mmHg}) \times (1.316 \times 10^{-3}) \quad \text{or} \quad \text{ATM} = ("Hg) \times (3.34207 \times 10^{-2})$$

Note: Tolerances are noted as **BOLD** in Brackets

## Audit

### Status

Noise <**0.10**µg 0.008  
 Pump Vacuum 0.35

Warnings None

### Temperature/Pressure

Measured Temp (**± 2** °C) 19.4  
 Measured Press (**± 0.01**atm) 0.934

Δ °C 0.0  
 ΔATM -0.005

### Flow Audit

Indicated Main Flow (l/min) 3.00  
 Measured Main Flow (l/min) 2.97  
 Indicated Bypass Flow (l/min) 13.67  
 Measured Bypass Flow (l/min) 13.64

Main Flow Drift (**±10.0%**) 4.78%  
 Flow Adjusted to Measured? YES  
 Bypass Flow Drift (**±10.0%**) 4.29%  
 Flow Adjusted to Measured? YES

### Leak Check

Main (< 0.15 l/min) NA  
 Aux (< 0.15 l/min) NA

### Instrument Setup

Flow Control = Active  
 Report Conditions = Standard (25.0 C and 1atm)

### K<sub>o</sub> Factor

Measured NA  
 K<sub>o</sub> Difference (**± 2.5%**) NA

Start Time: 10:05

Finish Time: 11:45

Sample Inlet Cleaned: Yes

New Filters Installed: NO

New Filter Loading %: 28.3%

Comments: Flows were adjusted to the audit values, inlet was cleaned, both the Teom and FDMS filters were replaced. Allowed some time for the unit to stabilize.

Auditor/s:

Shea Beaton

5107W- 50TH STREET  
BONNYVILLE, AB  
CANADA T9N 2J5

**Report Date: 2009/08/25**

This report supersedes all previous reports with the same Maxxam job number

**CERTIFICATE OF ANALYSIS****MAXXAM JOB #: A940939****Received: 2009/08/06, 08:15**

Sample Matrix: Air

# Samples Received: 42

Analyses	Quantity	Date Extracted	Date Analyzed	Laboratory Method	Analytical Method
H2S Passive Analysis 0	25	2009/08/20	2009/08/24		EDM SOP-0320
NO2 Passive Analysis 0	33	2009/08/19	2009/08/24		EDM SOP-0318
O3 Passive Analysis 0	33	2009/08/20	2009/08/24		EDM SOP-0317
SO2 Passive Analysis 0	37	2009/08/24	2009/08/24		EDM SOP-0319
SO2 Passive Analysis 0	1	2009/08/24	2009/08/25		EDM SOP-0319

\* RPDs calculated using raw data. The rounding of final results may result in the apparent difference.

(1) The detection limit is based on a 30 day sampling period.

**Encryption Key**

	Method Blank	Calculated SO2	2009/08/24	<0.1		ppb	

Calibration Check: A calibration standard analyzed at different times to evaluate on-going calibration accuracy.

Spiked Blank: A blank matrix to which a known amount of the analyte has been added. Used to evaluate analyte recovery.

Method Blank: A blank matrix containing all reagents used in the analytical procedure. Used to identify laboratory contamination.

• Nitrogen Dioxide	98

# Introduction

The following Ambient Air Monitoring report was prepared for:

Mr. Mike Bisaga  
**Lakeland Industry & Community Association**  
Box 8237  
5107W – 50 Street  
Bonnyville, Alberta  
T9N 2J5

Monitoring Location: Maskwa

Data Period: July 2009

The monthly ambient data report:

- Prepared by Lily Lin
- Reviewed by Craig Snider

The monthly analytical report for static & passive monitoring:

- Authorized by Levi Manchak

## Calibration Procedure

The following calibration procedure applies to all calibrations conducted at the Lakeland Industry & Community Association Air Monitoring Station.

Calibration gas concentrations are generated using a dynamic mass flow controlled calibrator. EPA Protocol one gases are diluted with zero air generated on site. The Mass Flow Controllers in the calibrator are referenced using an NIST traceable flow meter once per month. All listed flows are reported as corrected to Standard Temperature and Pressure (STP).

Generated zero gas is introduced to the analyzer first. Three concentrations of calibration gas are then generated in order to introduce points at approximately 50-80%, 25-40% & 10-20% of the analyzer's full-scale range. An auto zero and span are then performed to validate the daily zero and span values recorded to the next multi-point calibration.

All indicated concentrations are taken from the ESC data logger used to collect the data for monthly reporting.

The calibrations conducted at the LICA - Maskwa Air Monitoring Stations conform to the following Maxxam Analytics Standard Operation Procedures:

- CAL SOP-00211
- CAL SOP-00209
- CAL SOP-00213
- CAL SOP-00214
- CAL SOP-00208

Conformance of each calibration to Alberta Environment regulations is outlined in the individual calibration reports. The slope and correlation coefficient are derived from the calculated and indicated analyzer responses. The percent change is calculated using the previous calibration correction factor and the current correction factor before adjustment. All calibration's and maintenance conforms to the procedures outlined in the *Air Monitoring Directive, Appendix A-10, Section 1.6*.

# General Monthly Summary

## Equipment Operation

The following summary outlines the analyzer performance. Any non-conformances, problems or maintenance performed are detailed at the end of each section.

### AQM STATION – LICA – Maskwa

#### Sulphur Dioxide (PPB)

- Analyzer make / model - API 100E

The analyzer spanned lower than -10% of control range on July 6<sup>th</sup> and July 7<sup>th</sup> due to the permeation tube failure. The perm tube was replaced on July 8<sup>th</sup>. It was expected the span would take several days to stabilize after the perm tube replacement. The UV lamp filter was replaced following the as found points on July 9<sup>th</sup>. After that a lamp calibration was a factory calibration were performed. A post repair calibration was performed on July 10<sup>th</sup>, and no issue was noticed. The expected span value was adjusted on July 10<sup>th</sup>. The inlet filter was changed before the monthly calibration was started. An auto daily calibration was not done on July 15<sup>th</sup> and 16<sup>th</sup> due to a Modbus installation. After the installation, the expected span value was incorrect, and the error was corrected on July 19<sup>th</sup>. An alarm test was performed on July 9<sup>th</sup>, the triggered and was received by the control room, but did not cancel. The problem was rectified after the Modbus installation. Data was corrected using daily zero information.

#### Hydrogen Sulphide (PPB)

- Analyzer make / model - API 101E

The temporary Maxxam-Supplied UV lamp driver board was replaced with a new (latest revision "Yellow Dot") UV lamp driver board from API and the permeation tube were replaced following the as found point on July 9<sup>th</sup>. After a multi-point calibration was performed, the expected zero and span values were adjusted. It was expected the span would take several days to stabilize after the perm tube replacement. As found points were put to the analyzer to verify operation on July 14<sup>th</sup>, and no issue was discovered. The expected span value than was adjusted to match the last daily span. An auto daily calibration was not done on July 15<sup>th</sup> and 16<sup>th</sup> due to a Modbus installation. After the installation, the expected span valued was incorrect, and the error was corrected on July 19<sup>th</sup> and readjusted on July 20<sup>th</sup>. The expected span value was re-adjusted following a single point check because the permeation tube was not yet fully stabilized after the single point check on July 14<sup>th</sup>.

# General Monthly Summary

## AQM STATION – LICA – Maskwa

### Total HydroCarbon (PPM)

- Analyzer make / model –TECO 51C-LT

A Coalescer and H<sub>2</sub>O knock-out valve in the zero air supply were replaced following the as found points on July 10<sup>th</sup>. A tee and single stage regulator were added to the zero air line going from the supply to the analyzer, and the regulator was connected to the zero air port on the analyzer. It allows station zero air to be used for daily calibration not cylinder. A new cylinder of hydrogen, supplied by Maxxam, was also installed on July 10<sup>th</sup>. An auto daily calibration was not done on July 15<sup>th</sup> and 16<sup>th</sup> due to a Modbus installation. After the installation, the expected span valued was incorrect, and the error was corrected on July 19<sup>th</sup>. The inlet filter was changed before the monthly calibration was started. Data was corrected using daily zero information.

### Nitrogen Dioxide (PPB)

- Analyzer make / model - API 200E

The DFU filter and the permeation tube was replaced following the as found points on July 9<sup>th</sup>. An analog output calibration was performed on July 9<sup>th</sup>. A multi-points calibration was performed on July 10<sup>th</sup>. The expected zero/span values were adjusted on July 11<sup>th</sup>. An auto daily calibration was not done on July 15<sup>th</sup> and 16<sup>th</sup> due to a Modbus installation. After the installation, the expected span valued was incorrect, and the error was corrected on July 19<sup>th</sup>.The inlet filter was changed before the monthly calibration was started. Data was corrected using daily zero information.

### Vector Wind Speed (KPH) & Vector Wind Direction (DEG)

- System make / model - Climatronics MIII

The wind system is reported as vector wind speed and vector wind direction. The wind system is reported as vector wind speed and vector wind direction. The wind system channel was put in the “Maintenance” mode due to the Modbus installation for 10 hours this month.

# General Monthly Summary

## AQM STATION – LICA – Maskwa

### Relative Humidity (PERCENT)

- System make / model - Met One 083

No operational issues observed during the month. The RH channel was put in the “Maintenance” mode due to the Modbus installation for 14 hours this month.

### Precipitation (MM)

- System make / model - Met One 387

The Precipitation channel was put in the “maintenance” mode due to the Modbus installation for 9 hours this month. After the installation on July 15<sup>th</sup>, the configuration was incorrect. The error was corrected on July 16<sup>th</sup>. A total of 16 hours of data was invalidated.

### Barometric Pressure (MILLIBAR)

- System make / model - Met One 092

The BP channel was put in the “maintenance” mode due to the Modbus installation for 7 hours this month. After the installation on July 15<sup>th</sup>, the configuration was incorrect. The error was corrected on July 16<sup>th</sup>. A total of 23 hours of data was invalidated.

### Ambient Temperature (DEGC)

- System make / model - Met One 060

The Ambient Temperature channel was put in the “maintenance” mode due to the Modbus installation for 10 hours this month. After the installation on July 15<sup>th</sup>, the configuration was incorrect. The error was corrected on July 21<sup>st</sup>. A total of 146 hours of data was invalidated.

# General Monthly Summary

## AQM STATION – LICA – Maskwa

### Trailer Temperature (DEG C)

- System make / model – R&R 61

The Trailer Temperature channel was put in the “maintenance” mode due to the Modbus installation for 10 hours this month.

### Standard Deviation Wind Direction (DEG)

- System make / model – Climatronics MIII

The wind system channel was put in the “Maintenance” mode due to the Modbus installation for 10 hours this month. As a result, the data for the standard deviation wind direction was flagged as “Maintenance” the same time as the wind system was.

### Datalogger

- System make / model - ESC 8832
- Software make/version - ESC v 5.51a

A Modbus installation was performed on July 15<sup>th</sup> to July 17<sup>th</sup>.

### Trailer

No issues with the station. The manifold and inlet tubing were cleaned on July 10<sup>th</sup>.

## **Introduction**

The following Ambient Air Monitoring report was prepared for:

Mr. Mike Bisaga  
**Lakeland Industry & Community Association**  
Box 8237  
5107W – 50 Street  
Bonnyville, Alberta  
T9N 2J5

Monitoring Location: St. Lina

Data Period: July 2009

The monthly ambient data report:

- Prepared by Lily Lin
- Reviewed by Craig Snider

## Calibration Procedure

The following calibration procedure applies to all calibrations conducted at the Lakeland Industry & Community Association Air Monitoring Station.

Calibration gas concentrations are generated using a dynamic mass flow controlled calibrator. EPA Protocol one gases are diluted with zero air generated on site. The Mass Flow Controllers in the calibrator are referenced using an NIST traceable flow meter once per month. All listed flows are reported as corrected to Standard Temperature and Pressure (STP).

Generated zero gas is introduced to the analyzer first. Three concentrations of calibration gas are then generated in order to introduce points at approximately 50-80%, 25-40% & 10-20% of the analyzer's full-scale range. An auto zero and span are then performed to validate the daily zero and span values recorded to the next multi-point calibration.

All indicated concentrations are taken from the ESC data logger used to collect the data for monthly reporting.

The calibrations conducted at the LICA – St. Lina Air Monitoring Stations conform to the following Maxxam Analytics Standard Operation Procedures:

- CAL SOP-00211
- CAL SOP-00209
- CAL SOP-00213
- CAL SOP-00214
- CAL SOP-00208

Conformance of each calibration to Alberta Environment regulations is outlined in the individual calibration reports. The slope and correlation coefficient are derived from the calculated and indicated analyzer responses. The percent change is calculated using the previous calibration correction factor and the current correction factor before adjustment. All calibration's and maintenance conforms to the procedures outlined in the *Air Monitoring Directive, Appendix A-10, Section 1.6*.

# General Monthly Summary

## Equipment Operation

The following summary outlines the analyzer performance. Any non-conformances, problems or maintenance performed are detailed at the end of each section.

### AQM STATION – LICA – St. Lina

#### Sulphur Dioxide (PPB)

- Analyzer make / model - API 100E

No operational issue was observed during this month. The monthly calibration was performed on July 15<sup>th</sup>. Several power failure events occurred during this month that caused 21 hours of data invalidated. After the power failure on July 18<sup>th</sup>, the analyzer daily zero was reading 7 ppb as a baseline. The analyzer was re-calibrated on July 21<sup>st</sup>, and no issue was discovered. Data was corrected using daily zero information.

#### Hydrogen Sulphide (PPB)

- Analyzer make / model - API 101E

After the calibration on July 26<sup>th</sup>, the sample inlet line was left disconnected and sample air was collected from inside the trailer. This issue was noticed and corrected on July 15<sup>th</sup>, and then the monthly calibration was performed. The data was invalidated from July 1<sup>st</sup> to July 15<sup>th</sup> before the monthly calibration. 343 hours data was invalidated during this month. Several power failure events occurred during this month that caused 20 hours of data invalidated. After the power failure on July 18<sup>th</sup>, the analyzer daily zero was reading -4 ppb as a baseline. The analyzer was re-calibrated on July 21<sup>st</sup>, and no issue was discovered. Data was corrected using daily zero information.

# General Monthly Summary

## AQM STATION – LICA – St. Lina

### Total HydroCarbon (PPM)

- Analyzer make / model –TECO 51C

A new single stage regulator was installed on the daily calibration zero air port on the rear bulkhead of the analyzer following the as found points on July 15<sup>th</sup>. The zero air from the station zero air supply was tee'ed at the FID air port on the rear bulkhead and a line was installed going to the new regulator. This allows the station zero air supply to be used as the supply of zero air for the daily zero/span calibration. The analyzer flamed out following a power failure on July 16<sup>th</sup>, and the analyzer was re-lit on July 17<sup>th</sup>. A daily calibration program was ran after relit. Another power failure event occurred on July 18<sup>th</sup> causing the analyzer to flame out, and it was re-lit on July 20<sup>th</sup>. A total of 21 hours of data was invalidated during this month due to power failures. 17 hours of data on July 16<sup>th</sup> and 16 hours of data on July 19<sup>th</sup> were invalidated due to the power failures causing the analyzer to flame out. Data was corrected using daily zero information.

### Nitrogen Dioxide (PPB)

- Analyzer make / model - API 200E

No operational issue was observed during this month. The monthly calibration was performed on July 15<sup>th</sup>. Several power failure events occurred during this month that caused 22 hours of data invalidated. Data was corrected using daily zero information.

# General Monthly Summary

## AQM STATION – LICA – St. Lina

### Vector Wind Speed (KPH) & Vector Wind Direction (DEG)

- System make / model – Met 50.5

The wind system is reported as vector wind speed and vector wind direction.

The wind system was checked on July 15<sup>th</sup>. The wind speed was reading 2 km/hr high at zero and 6 km/hr low at full scale. The wind direction was reading 7 degree with the North/South pathway blocked, 150 degree with the East/West pathway blocked, and 160 degree with both pathways blocked. Switched power supply-same readings; switched sensor-same readings; switched cables- readings normalized. When the cable was initially switched, the shield was not connected- this configuration resulted in normal readings. When the shield was connected to the data logger, the readings reverted back to what they were prior to the cable change. The wind system cable was left with the shield disconnected from the logger.

Readings after connection change: Wind Speed (WS) at expected zero was 0.0kph; N/S pathway blocked: WS=177kph, WD=10 degree; E/W pathway blocked: WS=177kph, WD=158 degree; N/S and E/W pathways blocked: WS=177kph, WD=167 degree.

### Datalogger

- System make / model - ESC 8832
- Software make/version - ESC v 5.51a

The station is connected to a modem to allow for daily polling of the station.

One-minute data between July 1<sup>st</sup> and July 5<sup>th</sup> is missing because of communication difficulty.

### Trailer

No issued was discovered.
