Monitoring Notes during the Month of September 2021

Cold Lake South

- All data collected this month were compliant with the requirements outlined in the AMD 2016.
- All parameters met the 90% operational uptime requirement.
- Measured parameters were below Alberta Ambient Air Quality Objectives (AAAQOs) and/or Alberta Ambient Air Quality Guidelines (AAAQGs) where applicable.
- **THC/CH4/NMHC:**
 - Sporadic bad injections were noted commencing on September 3 and becoming frequent on September 4. A successful multi-point calibration was completed on September 5 to correct the issue. 1-minute data collected between September 3 and September 5 were reviewed and invalidated if data quality were affected by the injection issues. Two hourly data were invalidated as the 75% of valid 1-minute in an hour requirement were not achieved. Two hours of downtime were recorded due to this event.
 - Poor injections were recorded again starting September 13 hour 21. On September 14, a shut down calibration was attempted but failed due to multiple bad injections. The Thermo 55i analyzer, s/n: 1180030034, was removed, and the Thermo 55i analyzer, s/n: 1180930025, was installed. A successful installation calibration was completed on September 15. 1-minute data collected between September 13 and September 15 were reviewed and invalidated if data quality were affected by the injection issues. Twenty-four hours of data were invalidated as the 75% of valid 1-minute in an hour requirement were not achieved. Twenty-eight hours of downtime were recorded due to invalid data and additional quality check.

- **PM2.5:** No data were recorded between September 12 hour 7 and September 13 hour 7, likely due to communication issues between the analyzer and the datalogger. The PM unit was reset to correct the problem. Twenty-five hours of downtime were recorded due to this event.

Tamarack (formerly Maskwa)

- All data collected this month were compliant with the requirements outlined in the AMD 2016.
- All parameters met the 90% operational uptime requirement.
- Measured parameters were below Alberta Ambient Air Quality Objectives (AAAQOs) and/or Alberta Ambient Air Quality Guidelines (AAAQGs) where applicable, except PM2.5. One 1-hr exceedance was recorded this month. The exceedance recorded this month was likely due to road construction in the vicinity of the station.

| Date | Time (MST) | Average Period | AAAQOs / AAAQGs ($\mu\text{g}/\text{m}^3$) | Concentration ($\mu\text{g}/\text{m}^3$) | Reference # |
|-------------|------------|----------------|--|--|-------------|
| September 8 | 6 | 1-Hour | 80 | 167 | 383326 |

- **O3:** On September 15, a successful shut-down calibration was performed on the BV-supplied API 400A analyzer, s/n: 445, and the LICA-owned Thermo 49iQ analyzer, s/n: 1202068570, was installed following factory repair. The analyzer was allowed to stabilize overnight. An installation calibration was completed on September 16. Fifteen hours of downtime were recorded due to this event.

St. Lina Station

- All data collected this month were compliant with the requirements outlined in the AMD 2016.
- All parameters met the 90% operational uptime requirement.
- Measured parameters were below Alberta Ambient Air Quality Objectives (AAAQOs) and/or Alberta Ambient Air Quality Guidelines (AAAQGs) where applicable.
- **SO2:** The sample pump failed on September 14 hour 20 and was repaired on September 16. A successful post-repair calibration was completed on September 17. Sixty-six hours of downtime were recorded due to this event.
- **H2S:** The analyzer failed the daily span check on September 26 and the repeat zero-span check on September 27. A repeat multi-point calibration was completed to correct the drift on September 27. As the analyzer passed the September 27 multi-point calibration check, data collected between September 26 and 27 were considered valid. Six hours of downtime were recorded due to additional quality checks.
- **PM2.5:** On September 24, a successful shut-down audit was completed on the BV-supplied Thermo Sharp 5030i unit, s/n: CM17461021, and the LICA-owned Thermo Sharp 5030i unit, s/n: CM1709100, was installed and calibrated. The unit was removed for major repair/maintenance on May 6. Four hours of downtime were recorded due to this event.

Integrated Sampling

All the integrated sampling analytical results are included in the September 2021 Integrated Sampling Report.

- **VOCs Sampling System:**
 - The VOC sampler is programed to collect a 24-hour sample of air every sixth day as per the North American Pollution Surveillance schedule (NAPS).
 - Five samples were collected this month: on September 1, 7, 13, 19 and 25.
- **PAHs Sampling System:**
 - The PAH sampler is programed to collect a 24-hour sample of air every sixth day as per the North American Pollution Surveillance schedule (NAPS).
 - Five samples were collected this month: on September 1, 7, 13, 19 and 25.
- **Partisol Sampling System:**
 - The Partisol sampler is programed to collect a 24-hour sample of air every sixth day as per the North American Pollution Surveillance schedule (NAPS).
 - Five samples were collected this month: on September 1, 7, 13, 19 and 25. However, the sample filters collected on September 7 went missing during courier and cannot be retrieved.
- **Passive Sampling System:**
 - The passive sample filters were installed at the stations between August 30 and September 1, and were removed between September 29 and October 1.
 - A total of 9 duplicate samples were collected: 2 for H₂S, 3 for SO₂, 2 for NO₂ and 2 for O₃.
- **PAC Sampling System:**
 - The PAC sampling program began in September 2019, and is designed to collect a 2-month integrated sample.
 - The PAC sampling program is temporary paused as the EC laboratory is currently closed.

Revisions to Alberta's Ambient Air Quality Data Warehouse

No revisions to historical data previously submitted to the Alberta's Ambient Air Quality Data Warehouse were made this month.

Deviations from Authorized Monitoring Methods

No deviations from authorized monitoring methods were recorded this month.

Disclaimer

Baseline correction were performed on the 1-minute data. 5-minute and hourly data were calculated based on the post-baseline correction 1-minute data set. Data verification/validation were then performed on the 5-minute and hourly data. Hourly data that are included in this report are the post-validation hourly data set.

Equipment calibration / maintenance records were provided by Bureau Veritas Canada.

Certification

This report was prepared and submitted by Lily Lin in accordance with Chapter 9 of the Air Monitoring Directive (AMD 2016).

Lily Lin, Data & Reporting Specialist, LICA Airshed

This report was reviewed by Mike Bisaga in accordance with Chapter 9 of the Air Monitoring Directive (AMD 2016).

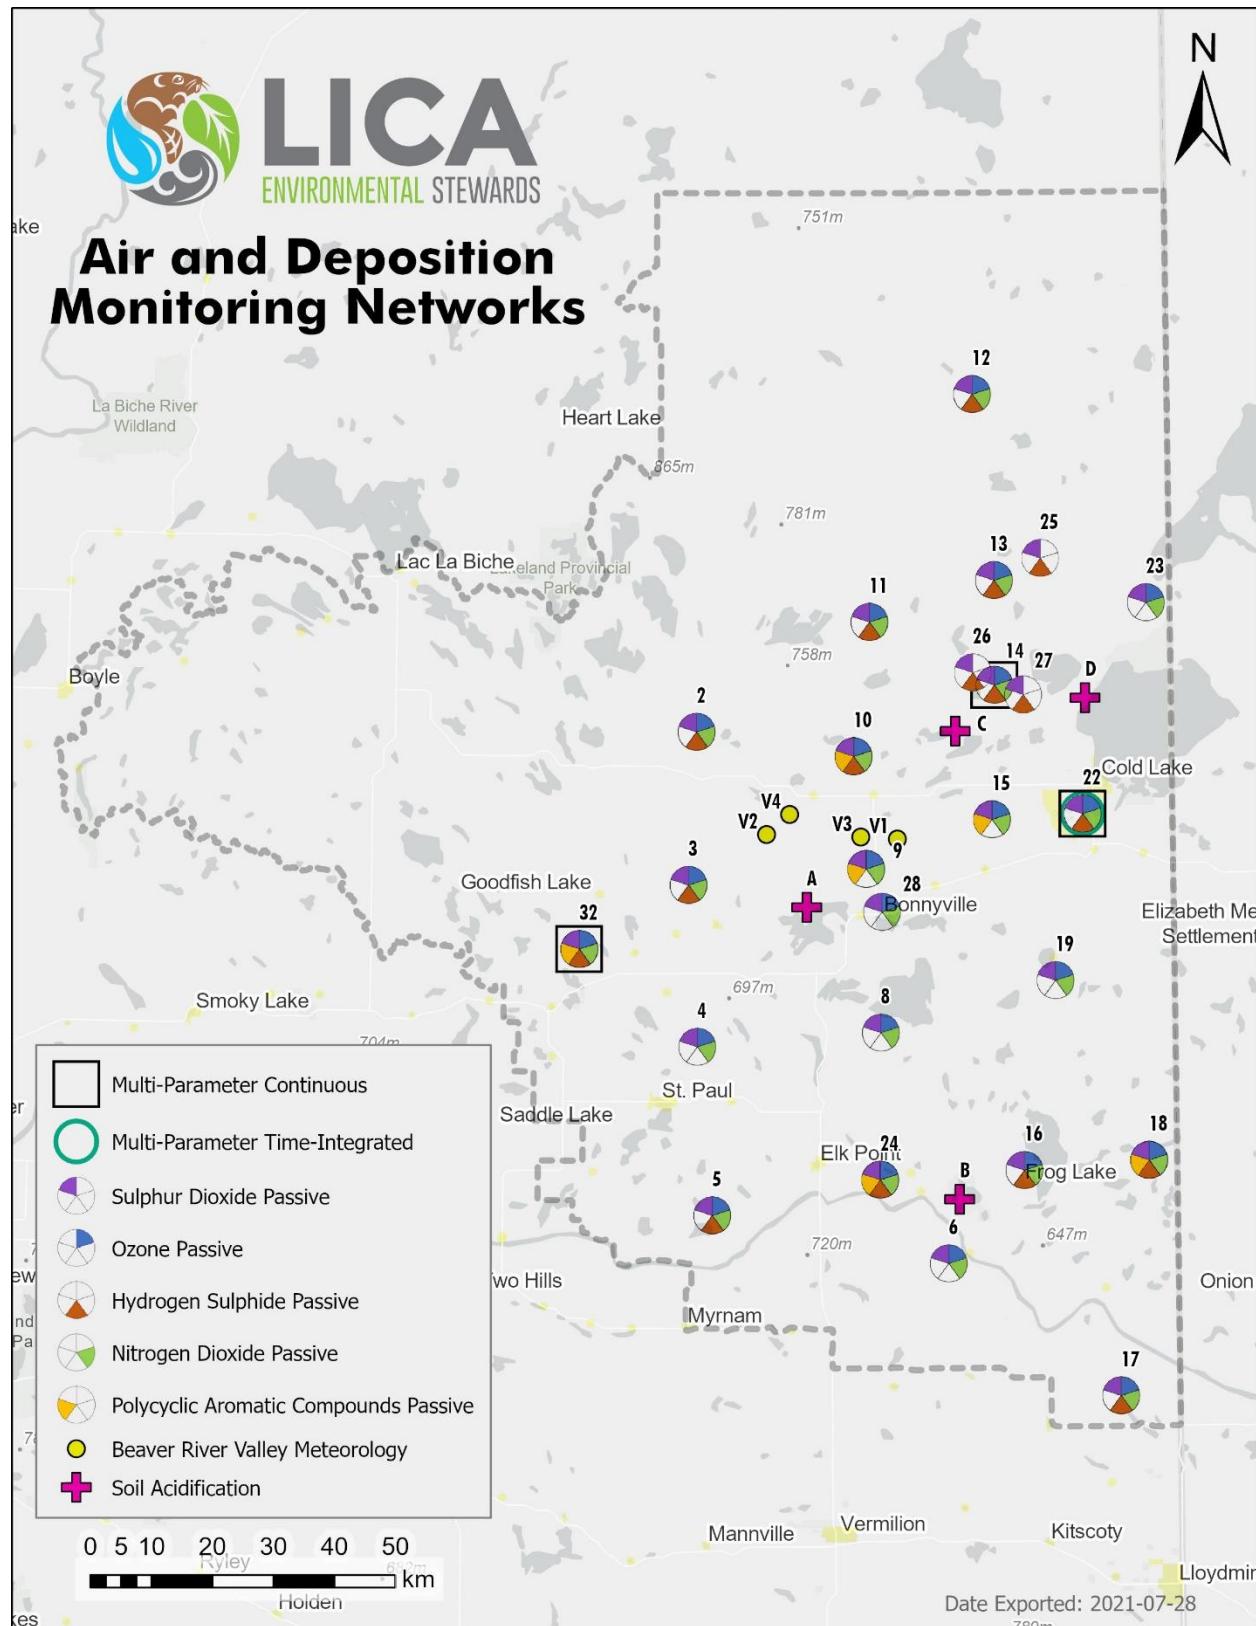

I certify that I have reviewed and verified this report and that the information is complete, accurate and representative of the monitoring results, reporting timeframe and the specified analysis, summarization and reporting requirements. I also certify that at the time of this report's submission, all air data have been electronically uploaded to Alberta's Ambient Air Quality Data Warehouse as required by the AMD, with the exception of electronic submission for the results of intermittent samples, Partisol samples and passive samples. Electronic submission for the intermittent sample, Partisol sample and passive sample results will be performed during the preparation of the September 2021 integrated sampling report. Uploading of VOC data from the canister sampling program was not required at the time of completing this report.

Alberta Ambient Air Quality Objectives (AAAQOs)and/or Alberta Ambient Air Quality Guidelines (AAAQGs) Exceedances

The following exceedance of AAAQGs was observed at the Tamarack Site.

| Date | Time (MST) | Parameter | Average Period | AAAQOs | Concentration | Wind speed | Wind Direction | Reference # |
|-------------|------------|-----------|----------------|----------|---------------|------------|----------------|-------------|
| September 8 | 6 | PM2.5 | 1-Hour | 80 µg/m3 | 167 µg/m3 | 0.5 km/hr | 252° (WSW) | 383326 |

The exceedance recorded this month was likely due to road construction in the vicinity of the station.
