

Calling all Wildlife Enthusiasts!

Looking for a Fun Activity to Take Part in Over the Winter Months?

From January - March 2024, LICA is promoting Citizen Science Wildlife Monitoring, and we need your help to identify and count wildlife species in the region!

How Can You Get Involved?

We want to know what wildlife species YOU see over the winter months! Wildlife features such as tracks, and scat are included. Whether you are travelling and sight wildlife from your car window, are watching birds from your window feeder or are ice angling, we want to hear about it!

Why Should You Participate?

Winter Wildlife Monitoring provides an opportunity for naturalists, both novice and experienced, to meaningfully contribute to science and the conservation of biodiversity.

Citizen Science Winter Wildlife Monitoring is a great activity for all ages!

How to Start!

Click the links below or head over to the [‘What’s New’](#) section on the LICA Website to access the data forms.

There are three form options to choose from:
Birds, General Wildlife, and Fish.

For ease in data submission, each form has two options:

1. An online form to electronically submit data.
2. A downloadable form to submit via email.

When wildlife is sighted, fill out the respective form, and submit!
It’s that easy!
