

Planter

By Taylor Grenne

Last week April 23rd me and my class attended a planting class with Daisy Planter in Edmonton Alberta.

She talked about growing plants.

My school is called Kindler Elementary school.

I'm going to tell you how to grow plants so you'll need water, air, food and space in a pot. If you don't have a pot you can just use the ground outside make sure you put it where the sun shines. Look at it every day

You can plant all sorts of different plants like fruit vegetables and potatoes or just use the plants for show. "On Most fruits and vegetables the skin has the most nutrients". George W said "I really like this presentation so far".

Gardening is beneficial for school because it's good for the environment and good to learn about gardening.

Your school can do some activities about gardening like having a period of teaching how to plant or talking about cool facts about plants.

Magie H said "I'm going to ask my parents if I can try to plant something at home today".

Growing our own food is good for the environment because it doesn't need to be transported to us from other countries which means it has a smaller carbon footprint. It's good for you to plant in your free time.

I can't wait to start at home.
