Dear Mr. Prime Minister,

I read your letter and I also think climate change is a big problem in our daily lives and it's time to change and to help the environment. My personal opinion is that the best way to stop climate change is to use more renewable energy.

I pick renewable energy because it's in the name. It will always be renewable which will not make a big problem in the future. There are seven different types of renewable energy. All of them are smart and efficient ways to make energy. These are: solar, wind, hydroelectric, ocean, geothermal, biomass and hydrogen. According to a Google search, renewable energy only makes 11,5% of energy, but petroleum, nuclear and coal, which are toxic sources, make energy. All these three sources make 56,5% of the earth's energy. The other 32,1% of energy is from natural resources which is not that bad but not as good as renewable.

Back to the topic of climate change. We need to stop it before it gets out of hand. The other issues such as transportation, food waste and plastics are all just as important as renewable energy but, increasing renewable energy will not just help stop climate change, it will also be a more efficient, completely renewable and a safer way to make energy.

One day we will run out of ways to make energy, if we don't stop over exploiting the Earth's limited non-renewable resources. The time to act is now before climate change becomes irreversible.

Sincerely,

A handwritten signature in black ink that reads "Kale". The letters are cursive and connected.
